SUMMARY

Technical Product professional with 4+ years of experience building and scaling enterprise technology products at J.P. Morgan, with an MBA in Finance & Supply Chain and B.Tech in Computer Science. Experienced in identifying ambiguous business problems, defining product requirements, and driving solutions from discovery through delivery across Product, Engineering, Finance, Risk, Operations, and QA. Proven track record delivering measurable improvements across high-volume financial platforms, with hands-on 0→1 AI product experience using LLMs, NLP, Python, and LangChain.

SKILLS

- Product Discovery | Product Strategy | Product Requirements | PRDs | User Stories | Acceptance Criteria | Product Analytics | KPI Development | Roadmapping | Prioritization | Agile | Scrum | Cross-Functional Leadership
- AI & DATA: Generative AI | LLM Applications | AI Assisted Product Development | NLP | Prompt Engineering | LLM Evaluation | Python | SQL | LangChain | Gemini | Data Analysis
- TECHNICAL: Java | Spring Boot | APIs | Microservices | Kafka | Kubernetes | Distributed Systems | Cloud | Data Workflows

EXPERIENCE

JP MORGAN CHASE & CO. **Bengaluru, India**
SOFTWARE ENGINEER II July 2024

- Built a scalable FX & Derivatives processing platform to address manual workflow bottlenecks, analyzing end-to-end transaction journeys and prioritizing improvements that **increased** Straight-Through Processing **(STP)** to 95%.
- Re-engineered four high-volume trade lifecycle capabilities, amendment, split, cancellation, and netting to address scalability constraints, converting them into reusable APIs that **increased** processing capacity **10×.**
- Built "Can I Trade" to solve fragmented and inefficient trade-approval validation, **translating** complex business rules into an automated workflow that **improved approval efficiency by 97%** while supporting $200M-$2B in daily approvals.
- Built real-time product and operational analytics to address limited visibility into failures across distributed services, creating monitoring across 20+ Kubernetes microservices that **reduced incident resolution time by 40%.**
- **Modernized** a 40-year-old platform to address scalability and maintainability challenges, transitioning core workflows to distributed microservices while **coordinating** Product, Engineering, Finance, Risk, Operations, and QA for a platform processing 250K-300K daily transactions worth **$10B-$15B**.

SOFTWARE ENGINEER I January 2021 - December 2023

- Created clearer product requirements to address ambiguity across business and technology teams, **translating** needs from **5+ stakeholder** groups into user journeys, acceptance criteria, technical specifications, and actionable engineering plans.
- Improved messaging reliability to address recurring transaction-processing failures, analyzing Kafka and IBM MQ workflows to identify failure patterns and implement reusable improvements that **reduced troubleshooting** effort by **4-5 hours** per incident.
- Established a more predictable delivery process to address **cross-team execution** gaps, coordinating Product, Engineering, QA, Finance, and Operations through UAT, defect resolution, deployment validation, and production readiness.
- Improved reliability of high-volume financial workflows by identifying recurring transaction and dependency failures, analyzing systems supporting 250K+ daily transactions and prioritizing corrective actions based on operational data.

Award: J.P. Morgan Impact Award for driving platform modernization initiatives

PROJECT - AI FINANCIAL RESEARCH & ANALYSIS PLATFORM April 2026

- Identified the problem of time-intensive financial research across lengthy SEC filings and fragmented market data, building a 0→1 AI product using Python, NLP, LangChain, and Gemini to find, extract, and compare relevant information.
- Improved AI output reliability by designing validation workflows, refining prompts, parsing financial tables, and applying sentiment analysis to evaluate and contextualize model-generated insights.

EDUCATION

RUTGERS, THE STATE UNIVERSITY OF NEW JERSEY **Newark, NJ**
Rutgers Business School May 2026
Master of Business Administration - Finance and Supply Chain Management

- Dean's Excellence Award | Secretary, RBS MBA Finance Club

VELLORE INSTITUTE OF TECHNOLOGY **Chennai, India**
Bachelor of Technology - Computer Science May 2021
