EDUCATION

RUTGERS, THE STATE UNIVERSITY OF NEW JERSEY

Newark, NJ

Rutgers Business School

May 2026

Master of Business Administration - Finance and Supply Chain Management

- Dean's Excellence Award

VELLORE INSTITUTE OF TECHNOLOGY

Chennai, India

Bachelor of Technology - Computer Science

May 2021

EXPERIENCE

JP MORGAN CHASE & CO.

Bengaluru, India

Software Engineer II

2023 - 2024

- Built and operated distributed FX settlement microservices processing 250K–300K trades daily worth \$10B–\$15B, improving platform scalability and operational reliability across high-volume trading systems.
- Designed and developed Spring Boot APIs for Corporate FX trade lifecycle operations including amend, split, cancel, and netting workflows, enabling 10× higher throughput capacity through performance optimization and distributed load testing.
- Led development of a real-time event-driven monitoring platform across 20+ Kubernetes-based microservices, reducing mean time to resolution (MTTR) by 40% through centralized observability, live log streaming, intelligent alerting, and automated operational diagnostics.
- Engineered Kafka- and IBM MQ-based asynchronous messaging libraries with configurable retry, acknowledgment, and failure-handling workflows, reducing debugging and operational analysis time by 4-5 hours per incident.
- Developed a pre-trade validation platform (“Can I Trade”) handling \$200M–\$2B in daily approvals, improving workflow efficiency by 97% through automated validation rules, distributed processing, and resilient backend orchestration.

Software Engineer I

2021-2023

- Built cloud-compatible middleware services enabling legacy-to-modern platform migration for Brokerage FX systems, improving real-time trade visibility and reducing operational dependencies across distributed infrastructure components.
- Automated deployment and release workflows using Jenkins CI/CD pipelines, improving release reliability and enabling zero-downtime weekly production deployments in agile engineering environments.
- Partnered with infrastructure, platform, compliance, and product engineering teams to deliver resilient backend services accommodating compute, messaging, and data platform requirements across enterprise-scale cloud ecosystems.
- Contributed to Oracle database modernization and cloud migration initiatives by optimizing query execution, improving storage efficiency, and minimizing service downtime during infrastructure transition activities.
- Improved operational resilience through proactive incident response, root cause analysis, observability tooling, and automated service health diagnostics for critical financial applications.

Award: J.P. Morgan Impact Award (2022) for system modernization and engineering excellence

PROJECTS

Automated Data Extraction & LLM Synthesis Platform

- Built a Python-based platform to automate ingestion and analysis of SEC 10-K filings and Yahoo Finance data for S&P 100 companies, reducing manual research effort by 70%.
- Developed NLP based pipelines to extract and structure financial statements from unstructured SEC filings, enabling multi-year analysis across hundreds of reports.
- Engineered NLP and LLM pipelines using LangChain and Gemini to generate automated financial summaries, sentiment analysis, and risk insights from regulatory filings.
- Designed ETL workflows to process and export financial data into structured datasets (CSV/JSON), improving scalability and downstream analytics.

SKILLS

- Programming & Distributed Systems: Java, Python, SQL, Spring Boot, REST APIs, Microservices, Distributed Systems, Service-Oriented Architecture (SOA), Backend Services, APIs, System Design, Distributed Computing
- Cloud Infrastructure & Operations: Kubernetes, Docker, Cloud Infrastructure, Kafka, IBM MQ, Oracle DB, CI/CD
- AI & Developer Productivity: ETL Pipelines, NLP, Large Language Models (LLMs), LangChain, AI-Assisted Development, Code Generation, Test Generation, Workflow Automation, Operational Analysis, Developer Productivity Tooling, Documentation Automation, Git, Maven
